[redacted] Visibility & Interaction metrics

This dashboard looks at reach (visibility) and engagement (interaction) of discussions and knowledge articles [redacted]

Supply & demand ratio, interaction and visibility ratio are defined like this:
Interaction ratio (Interactions = Visible discussions or knowledge articles), interaction= e.g. like, share, bookmark, reply ...
Visibility ratio (Views = Visible discussions or knowledge articles)
Supply/Demand ratio for interactions (or visibility (Visible discussions or knowledge articles + views or interactions)> supply are the pages that had a view (to avoid counting pages that nobody is interested in), demand are page (discussion/knowledge article) views or interactions

Benchmark data are available at the bottom of the dashboard.

Next steps

As a community manager/marketer you can use the data in this dashboard to get started and find access points relevant to your specific role.
Feel free to make copies of the charts in the dashboard and tweak them based on your needs to consult data before planning your next steps.
If you're new to Amplitude, you might want to learn more [redacted]
[redacted] overview of the structure and names of amplitude events are available in this tracking plan.
Not sure where to start? Grab a cup of coffee or tea and watch this video series (each video is about 2 min. long) about the importance and application of data for inspiration & improvement:

Why data matters.mp4	Do you speak Datese.mp4	Growth Marketing in Practice.mp4
Why is change so hard for us.mp4	Become a data hero.mp4	Strategy house execution.mp4
Our Savannah Brain.mp4	I knew it all along.mp4	Learning by example

Analysis (March 2026)

Knowledge articles

Visibility ratio: Views per visible article (VVA): VVA = Total views ÷ Articles with ≥1 view
Supply-Demand (interactions) ratio (SDRI): SDRI = Articles with ≥1 view ÷ Total views
Orientation: Higher visibility ratio is better; lower supply-demand ratio is better (see benchmark data at the bottom of the dashboard)

What was the supply-demand ratio for knowledge articles in the last 30 days?
How did the supply-demand ratio change compared to the same period last year?

Knowledge article supply-demand ratio for visibility
Last 30 Days — NGMN Reporting — Custom Formula
Average Values from Feb 27 - Mar 28
This year
Last year

What was the visibility ratio for knowledge articles in the last 30 days?
How did the visibility ratio change compared to the same period last year?

Knowledge article visibility ratio
Last 30 Days — NGMN Reporting — Custom Formula
Average Values from Feb 27 - Mar 28

Forums within a large community can be treated as small communities for engagement analysis (and in many cases, they should be).
Here's why:

- **Distinct audience behavior:** Users often focus on one product forum. Engagement patterns differ by product complexity, lifecycle, and support needs.
- **Independent health signals:** A forum with high visibility but low interaction may need targeted activation—even if the overall community looks healthy.
- **Better benchmarking:** Applying "large community" benchmarks to a niche forum can mask problems. Smaller forums typically have higher expected interaction ratios (e.g., 0.50–1.00 vs. 0.17–0.33 for large).
